

VENTILATION MATTRESS

ABSTRACT OF THE DISCLOSURE

A ventilation mattress is constructed to include an outer
5 bag, the outer bag having air vents in a top fabric sheet layer
thereof and an air inlet, a flexible tube connected to the air inlet
of the outer bag, an electric fan installed in the flexible tube and
adapted to draw currents of air into the inside of the outer bag, a
fabric stuffing member formed of interwoven spandex fibers and
10 stuffed in the outer bag, a flexible pad provided at the bottom
side of the fabric stuffing member, the flexible pad having
springy support members connected between top and bottom
cover layers thereof for enabling air to circulate through the
flexible pad between the air inlet and the air vents at the outer
15 bag.
